To whom it may concern,

**RE: SPECIFICATION AND INSTALLATION OF HYNDS LC PRODUCTS**

To assist our customers with meeting their sustainability objectives, Hynds Pipe Systems have developed the Hynds LC range of lower carbon concrete pipe and precast concrete products. The Hynds LC range combines all the benefits of our industry-leading standard product ranges with a reduced carbon footprint. The carbon reductions are achieved through increased use of lower carbon footprint raw materials and components.

All the materials and processes used to manufacture the Hynds LC range conform to the relevant engineering standards, including NZS 3101 and AS/NZS 4058 and where RCRRJ concrete pipe is concerned, can be installed as per AS/NZS 3725. The joint profiles, installation methods and product geometries of Hynds LC products are also the same as Hynds standard range products. This means that there are no special requirements for the specification and installation of Hynds LC products.

If you have any further questions, our team of engineers are available to answer them.

Kind regards,

**David Richardson**
