

# Gillies Boundary Sewer Valve Kit

Technical Guide WW13

The Gillies Boundary Sewer Valve Kit is a three in one combination valve complete with PE ends and a service box designed for low pressure sewer boundary isolation.

03.25 | WASTEWATER | WW13 GILLIES BOUNDARY SEWERVE VALVE KIT

## Applications

Low pressure sewer system  
boundary connection

## Product Attributes

Integral ball and check valve  
Check valve fully serviceable in line  
1 ¼" BSP flushing port  
40mm OD PE pipe ends  
Drip tight shut off  
Corrosion resistant 316 SS (CF8M)

## Quality/Environment/Health & Safety

Manufactured and tested according to  
ASME B16.34  
Third party tested to AS4796:2016 in  
NATA certified facility  
ISO 9001:2015, ISO 14001:2015 and  
ISO 45001:2018

# The Gillies BSV provides a complete connection point for individual houses in a low-pressure sewer network.

Supplied as a single unit, the Gillies BSV kit contains a two-piece ball valve, soft seated check valve and integral flushing port, with PE pipe ends connected, all inside the service box, ready for installation.

With the check valve designed to be serviceable in line and the flanged two-piece ball valve body design, this valve provides serviceability without complete removal from the box.

## Product Attributes

- With a short face to face dimension, this valve is easy to fit and made from robust, corrosion resistant CF8M stainless steel. (The cast equivalent of 316SS).
- Each factory tested valve has a square drive for the ball valve, complete with thumb lugs for easy hand operation if required. These lugs also clearly indicate when the valve is open or closed.
- The 1 1/4" (32mm) BSP flushing port offers easy access for flushing and is mounted on top of the separate check valve servicing flange. This port is sealed with an 'O'-ring for consistent performance.

## Applications

- The Gillies Boundary Sewer Valve (BSV) is a three in one combination valve designed to be fitted to the PE pumped sewer discharge line at the point of connection between the property and the municipal sewer network system.

**Note:** Connections between the valve and the PE Line must be in accordance with the specification of the relevant local authority.
